Sample Scientific Poster

A subtitle

Author 1, Author 2, Author 3

Sample scientific poster

Some important remarks:

- Load the package `tueposter2018` to create scientific poster.
- Note that you can use the `narrowmargins` options to specify narrower margins.
- You cannot use a standard figure environment. Instead, just put pictures in a `center` environment and use

  ```
  \captionof{figure}{...}
  ```

  to specify a caption. See the example below.
- If you want to use other logos, besides the TU/e logo, please stick to the TU/e guidelines regarding the usage of company logos. To facilitate this, you can check out the LaTeX source code of this document to see an example of how you can include a company logo. You need to specify the company's main colour, because it will be used as a background for the TU/e logo.
- You need the `noto` font for this poster. This is available in the standard LaTeX package `noto`.
- Note that the poster size is A4, but since everything is scalable, you can print it in any paper size. Just make sure that your images are *scalable* or of a *high resolution*, so they still look good when scaled to a larger size.
